# Notes:

- *It should be noted that, conceptually, the export and import figures in the external trade statistics are different from that in the goods account of the balance of payments compilation. The compilation of international merchandise trade statistics is usually based on customs records, which essentially reflect the physical movement of goods across borders, and follow international guidelines on concepts and definitions i.e. International Merchandise Trade Statistics: Concepts and Definitions 2010 (IMTS 2010) which is different from the principles of the System of National Accounts (SNA) and the Balance of Payments Compilation. Goods are defined in the SNA as “physical objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets”.*
